positive attitude	5	5	5

Elizabeth, Michael and I are now a very good project team. Our strengths are being used appropriately and communication is strong. We all were very busy toward the end of the semester, however we were done with the coding of the project by the due date. The team enjoys coding more than planning, documenting and testing...so the documentation and testing is done last. We do identify small functional goals use an Agile approach with frequent communication and small components of working code. This helps the team stay motivated and upbeat about our ability to build the project. If we were putting together a larger system, I feel like our team would change this approach around so that we would document and test as we went through the process. Our use of version control for updates has improved through the semester. I think we would use branches more with larger projects as well. It has been an excellent experience working with Elizabeth and Michael.
